

Value Management Assessment

Measuring the gap between expectation and reality, setting requirements and providing a clear understanding of the steps to fulfil them.

A platform for identifying value generation

The Value Management Assessment is a comprehensive review of the organisations ability to implement future oriented management processes. It will provide a structured analysis of the gaps between the importance assigned to a set of generally accepted criteria and the degree by which they are met. The criteria set include softer aspects such as attitudes to **performance management** and responsibility through to current processes for setting objectives and the supporting business systems environment. Integral to the assessment is a review of the regulatory and compliance environment applied to the organisation.

Once there is a clear understanding of the improvements, they are to be prioritised and an implementation roadmap defining the evolutionary steps to an improved value management environment can be established.

Were required the assessment will include a review of the benefits to be gained from **integrating business processes** or currently deployed business process platforms. By applying recognised financial assessment tools the primary focus remains on Return on Investment, ensuring that all recommendations will be directly associated with defined objectives.

The discovery process

Step 1: Discovery workshops over a 3 to 5 day period enabling the analysis process. Allowing for freedom of thought the workshops will be partly structured covering the current organisation and expectations.

Step 2: The findings will be documented ensuring the early adoption of terminology, methodologies and ownership. The involvement of a dedicated person is required to facilitate and communicate internally.

Step 3: Within an agreed time period the final assessment will be published and presented specifying findings and recommendations.
